

Things you need to know about IGUANA-RID!

IGUANA-RID is a safe, natural, organic, animal and garden pest deterrent.

IGUANA-RID helps to deter iguanas, frogs, deer, snakes, squirrels, skunks, rabbits, raccoons, and many other unwanted pests and garden bugs.

IGUANAS are a problem. They eat and damage landscaping, they leave feces everywhere which can contain SALMONELLA BACTERIA, and they tunnel and dig under pavers and pool decks, causing washouts and depressions.

## **INSTRUCTIONS FOR USE**

### **SHAKE WELL ——— DO NOT DILUTE**

Spray IGUANA-RID thoroughly in all areas where Iguanas bask, feed, are seen or there is evidence of their presence such as droppings, claw marks or chewed plants. Spray on trees, shrubs, flowers, walkways, docks, roof tiles, pool decks, or any other areas where control is desired. For optimum results on pool areas, docks, patios, seawalls, decks, and other large areas, a heavier saturation of Iguana-Rid is required. **THE ONLY TIME IT DOES NOT WORK, IS WHEN YOU DON'T USE ENOUGH**

IGUANA-RID is not harmful, and works by producing an odor and taste which is disagreeable to Iguanas and many other garden pests. Initially applying liberal amounts will be most effective. A second, light touch up spray is recommended 2-4 days after the initial liberal application to reinforce the message that pests are not welcome here. Iguanas are creatures of habit, and as the product is a safe, natural deterrent, it can take several days to a week until the iguanas get the message. Reapplication is recommended every 3 to 5 weeks, depending on the severity of the infestation and amount of rain. Spray IGUANA-RID during dry conditions.

Avoid spraying IGUANA-RID directly on tender shoots and flowers during the hottest and sunniest parts of the day. Be sure to spray downwind, any odor will dissipate within 30 minutes.

**THANK YOU!**
